

TT BROKER TOOLS

TT's new ultra-low-latency software-as-a-service (SaaS) trading platform offers a streamlined, go-anywhere trading experience for brokers and other professional traders. The all-new scalable open architecture enables TT to innovate and end users to respond to changing market and customer needs with unprecedented speed and efficiency.

STRATEGY TEMPLATES

Quickly create option spreads and strategies using predefined templates, including Butterflies, Condors, Calendars, Straddles, Verticals and more. Load a template, select the instruments and go. Easily add and remove legs as needed. Save frequently used combos as personal templates for rapid re-creation.

FOREVER AUDIT TRAIL

The fully encrypted, cloud-based storage architecture allows for for nearly limitless analysis of account trade data. Access complete message details on orders, fills, rejects and more from today's trading or back in time to day one.

MOBILE AND WEB ACCESS

The open architecture supports a variety of front-end clients. Multi-monitor desktop setups, Windows, Mac OS, iOS and Android are supported. Monitor trades and positions on your mobile devices, and open your saved workspaces on the go when out of the office.

STREAMLINED BLOCK TRADING

TT's Blocktrader window is designed specifically for brokers. Select single contracts or create custom combos, set the counterparties for each side (or even per each leg), and submit the block order. Trade capture reports display in the bottom pane to document the deal, and can be filtered and exported.

ACCESS ALL TT FUNCTIONALITY

The full-featured platform includes market grids, the patented MD Trader®, charting, advanced order types and algorithmic execution. Customize spread trading with Autospreader® Rule Builder in ways previously not possible. Predefine account defaults and order quantities by market, product or product type.

SIMPLIFIED USABILITY

Search-based navigation provides streamlined, easy paths to contract selection and order execution. Flexible account, risk and market connectivity controls make TT a powerful, accessible, intuitive platform for end users and administrators.
